

1

Question: What is the primary motivation for developing this decentralized file-sharing platform?

- A) To explore cutting-edge technologies like blockchain and IPFS.
- B) To enhance security and privacy in digital content distribution.
- C) To create a user-friendly interface for file management.
- D) To implement incentive mechanisms for storage contribution.

Correct Answer: B

2

Question: What technology is planned to be used for decentralized file storage?

- A) Blockchain
- B) Centralized servers
- C) IPFS
- D) Smart contracts

Correct Answer: C

3

Question: What are the vulnerabilities of centralized file-sharing systems mentioned in the text?

- A) Slow transfer speeds and limited storage capacity
- B) Server downtime and cyberattacks on a central repository
- C) Lack of user-friendly interface and complex navigation
- D) High cost of maintenance and difficulty in scaling

Correct Answer: B

4

Question: How does the platform plan to manage user permissions and file access?

- A) Through centralized server administration
- B) Using smart contracts on a blockchain

C) By relying on user self-regulation

D) Through a combination of IPFS and centralized databases

Correct Answer: B

5

Question: Which feature is NOT explicitly mentioned as a functional requirement of the platform?

A) User registration and authentication

B) File uploading and sharing

C) Integration with social media platforms

D) Decentralized storage

Correct Answer: C
