

1

Question: Which of the following is NOT a core component of the Internet of Things (IoT)?

- A) Physical Object (Controller, Sensor, and Actuators)
- B) Connectivity (Internet)
- C) Artificial Intelligence Algorithms
- D) Controller

Correct Answer: C

2

Question: The IoT Reference Model layer responsible for converting protocols, routing data, and fast-path logic for low-latency decision-making is:

- A) Data Accumulation
- B) Edge Computing
- C) Connectivity
- D) Data Abstraction

Correct Answer: B

3

Question: In the context of Machine-to-Machine (M2M) communication, which stage involves interpreting the collected data and deciding on appropriate actions?

- A) Transmission of data
- B) Collection of data
- C) Assessment of data
- D) Response to information

Correct Answer: C

4

Question: Which communication protocol is NOT commonly associated with M2M communication?

- A) ZigBee
- B) MQTT
- C) Modbus
- D) HTTP

Correct Answer: B

5

Question: Which of the following is NOT a characteristic often associated with M2M devices?

- A) High mobility
- B) Time-controlled data transmission
- C) Small data transmissions
- D) Low power consumption

Correct Answer: A
